## What is Integrated Pest Management?

### *Introduction*

The definition of Integrated Pest Management?	1
Why do we need to develop IPM programs?	1
How do we implement IPM?	2
Other information about IPM	2
IPM groups/area wide management	2
IPM and earliness	2
IPM and the insecticide resistance management strategy (IRMS)	3
IPM, sampling and record keeping	3

## How to use these guidelines - Putting IPM into Practice

## IPM strategies - 'how to do it'

### *Objective 1 - Growing a healthy crop*

Introduction	6
Field selection	6
Do I pre-irrigate or water-up cotton?	6
Seed bed preparation	7
Selecting a cotton variety	7
Planting window	8
Optimising earliness	8
Planting into standing wheat stubble	9
Seed treatments, granular insecticides and in-furrow insecticides	10
Water budgeting and interaction with nitrogen	11
Nitrogen rate and crop nutrition	11
Growth regulators	12
Final irrigation	12
Objective of the last irrigation	12
Crop water use	12
Determining end of season crop water requirements	12
Defoliation	14

### *Objective 2 - Keeping track of insects and damage*

Introduction	15
Sampling beneficial insects and spiders	15
Sampling techniques	17
Sampling notes for individual pests	18
Early season plant damage	23
Monitoring tip damage	24
Monitoring fruit load	24
Monitoring first position fruit retention	25
Monitoring fruiting factor	26
Bollgard II® sampling and management	27
Pest abundance and damage thresholds	27

Recording and reviewing data to make decisions	32
Computerised decision support for pest management	33
Using the Early Season Diagnostic (ESD) tool	33
<b>Objective 3 - Beneficial insects - use them don't abuse them!</b>	<b>35</b>
Introduction	35
Use of the predator to pest ratio in spray decisions	35
Use of parasitoids in pest management decisions - using the beneficial to pest ratio	36
Sampling and determination of <i>Trichogramma</i> parasitism	37
Use of beneficial insect attractants (food sprays) to conserve and enhance beneficial insects	38
Decision making protocol for food sprays on conventional crops	39
Decision making protocol for food sprays on Bollgard II® crops	40
The application of food sprays	40
Using lucerne to manage mirids and as a nursery for beneficials	41
Conserving and enhancing parasitoids	43
Releasing <i>Trichogramma</i>	44
Tolerate non-economic early season damage to help conserve beneficials	45
Insect resistant transgenic cotton varieties	45
Appropriate use of insecticides	45
The beneficial disruption index	47
<b>Objective 4 - Prevent the development of insecticide resistance</b>	<b>48</b>
Introduction	48
Strategies for individual pests	50
<i>Helicoverpa</i>	50
Fast life cycle pests (mites, aphids, whiteflies)	53
Other pests can develop resistance	55
Using trap crops to prevent the development of resistance	55
Controlling resistant pests	56
Insecticide application failures	56
Resistance management for Bollgard II® crops	56
<b>Objective 5 - Managing crop and weed hosts</b>	<b>58</b>
Cotton insect pests and their weed hosts	58
Cotton insect pests and their crop hosts	60
Managing cotton stubble re-growth	61
Managing and knowing your rotation crop	61
<b>Objective 6 - Using trap crops effectively</b>	<b>63</b>
Introduction	63
First generation or 'Spring' trap crops in southern areas	64
Trap crops in Central Queensland	66
Last generation trap crops	66
<b>Objective 7 - Supporting IPM through communication and training</b>	<b>68</b>
Communicate with neighbours	68
Pesticide application management plan	68
Area Wide Management (AWM)	69
Meetings and training	71
<b>Glossary</b>	<b>72</b>
<b>Index</b>	<b>77</b>
